DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. Paragraph 14 of the specification (on page 4) states, "A conventional drive is represented schematically in FIG. 1." See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claim 1 objected to because of the following informalities: lines 5-6 of the claim states "wherein said first constant current source that limits a charging current of said intermediate circuit capacitor". This phrase is grammatically incorrect. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 rejected under 35 U.S.C. 102(e) as being anticipated by United States Patent 6,856,137 ("Roden").

Roden discloses a ground fault detection system with two constant DC feed lines, +DC link and –DC link (Figure 5). An intermediate capacitor C1 is connected between these feed lines, and a controller 800 controls the flow of current in the system. A current sensor 2000 is located on only one of the feed lines (the +DC link), and generates an output to controller 800. When the sensed current exceeds a predetermined limit, the switches of switching mechanism 400 (found in Figure 5, reference number taken from Figure 1) are interrupted (column 8, lines 5-18). Switches Q1, Q3, and Q5 are provided for the +DC link, and switches Q2, Q4, and Q6 for the –DC link.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 8 rejected under 35 U.S.C. 103(a) as being unpatentable over Roden and United States Patent 6,166,924 ("Assow"). Roden teaches a system with two constant DC feed lines, including an intermediate capacitor, a single current sensor, and a control device, but does not disclose the use of a recovery diode in-between the feed lines. Assow discloses a valley-fill circuit 10 (Figure 1), disposed in-between two DC feed lines. The valley-fill circuit includes diodes that connect between the two DC feed lines. It would have been obvious to one of

Art Unit: 2836

ordinary skill in the art at the time of the invention to include such a valley-fill circuit in the invention of Roden to stabilize the current output by the system.

Claims 9 and 10 rejected under 35 U.S.C. 103(a) as being unpatentable over Roden and United States Patent 4,507,724 ("Glennon"). Roden teaches a system with two constant DC feed lines, including an intermediate capacitor, a single current sensor, and a control device, but does not disclose the use of optically coupled, separate driver stages for the feed lines.

Glennon teaches the use of optically coupled, separate base drives 38 and 40 (Figures 2 and 3) to control the enabling of feed lines 17a and 17b (column 3, lines 59-63). It would have been obvious to one of ordinary skill in the art at the time of the invention to include separate base drives that are optically coupled to prevent problems of impedance matching.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

United States Patent 6,275,393 (Baudelot et al.) concerns a pre-charging circuit for an intermediate capacitor in a power converter.

United States Patent Application Publication 2005/0168897 (Komulainen) concerns the charging of a filter capacitor in the intermediate circuit of a frequency converter.

United States Patent 5,953,490 (Wiklund et al.) utilizes optically coupled driver stages in a motor controller.

Art Unit: 2836

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew M. Deschere whose telephone number is (571) 272-8391. The examiner can normally be reached on M-F 8:30-6:00, every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Sircus can be reached on (571) 272-2800 x36. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
